Applicant's arguments with respect to claims 35, 37-42 and 44-48 have been considered but are most in view of the new ground(s) of rejection.

Specifically applicants newly added limitations necessitated the new citation in the reference (Column 2 lines 26-46), which clearly shows a type separate from size which must be met for the third routine to be executed. It is determined if the message is addressed to the receiver by using information in the preamble of the message, therefore it is clearly shown that the type of message is included with the transmission of the message as required by applicant's newly added limitations. Amendments changing the scope of the claims were made, which means this action will be made final and prosecution is closed.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 35, 37-42 and 44-48 are rejected under 35 U.S.C. 102(b) as being anticipated by ICHIKAWA et al (US 4,626,842 A).

Regarding claim 35, ICHIKAWA et al discloses message alert system for a communication device (all elements of figure 1) wherein the communication device comprises a processor (element 4 of figure 1 and column 2 lines 42-46) and a display (element 8 of figure 1) for displaying information, comprising: a computer-readable medium (element 401 of figure 3);

and a routine stored in the computer-readable medium and configured for execution by the processor, the routine comprising: a first routine that receives a message comprising the information (column 3 lines 62-67); a second routine that analyzes the message to determine from type identifying data transmitted with the message a size thereof (column 4 lines 8-32), and further analyzes the message to determine whether the message is of a message type for which the third routine is executed wherein the criteria for the type of message is different from a criteria based on the size of the message (Column 2 lines 26-46); a third routine that generates a display item for the message in accordance with the size thereof (column 5 lines 11-57), if the message is of the type for which the third routine is executed.

Regarding claim 37, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses an initialization routine that specifies the message type (based on number of digits) for which the third routine is executed (column 3 line 62 to column 4 line 32).

Regarding claim 38, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses that the generated display item comprises a reproduction of the message when the second routine determines that the size of the message is less than a predetermined size (column 3 line 62 to column 4 line 32).

Regarding claim 39, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses the generated display item comprises a reproduction of the message when the second routine determines that the size of the message is greater than a predetermined size; and the routine comprises a fourth routine that

provides the generated display item to the display for a predetermined time (column 3 line 62 to column 4 line 32).

Regarding claim 40, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses that the routine comprises a fifth routine that generates a further display item that comprises a portion of the message when the second routine determines that the size of the message is greater than a predetermined size; and the routine comprises a sixth routine that provides the further display item to the display after the predetermined time has elapsed (column 3 line 62 to column 4 line 32).

Regarding claim 41, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses that the message is transmitted to the communication device via a network; and the network is a broadcast network (column 2 line 27 to column 4 line 32).

Regarding claim 42, ICHIKAWA et al discloses a method of controlling a communication device (all elements of figure 1) having a display (element 8 of figure 1) for displaying information, the method comprising the steps of: receiving a message comprising the information (column 3 lines 62-67); analyzing the message to determine a size thereof, wherein the criteria for the type of message is different than a criteria based on the size of the message (Col. 3 line 62-Col. 4 line 7), and further analyzing the message to determine from type identifying data transmitted with the message whether the message is of a message type for which the generating step is executed (Column 2 lines 26-46); and generating a display item for the message in accordance with the size thereof (column 5 lines 11-57), if the message is of the type for which the generating step is executed.

Art Unit: 2618

Regarding claim 43, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses analyzing the message to determine whether the message is of a message type for which the generating step is executed (column 3 line 62 to column 4 line 32). This is read as when the message is limited to 10 digits.

Regarding claim 44, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses an initialization routine that specifies the message type (based on number of digits) for which the third routine is executed (column 3 line 62 to column 4 line 32).

Regarding claim 45, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses that the generated display item comprises a reproduction of the message when the second routine determines that the size of the message is less than a predetermined size (column 3 line 62 to column 4 line 32).

Regarding claim 46, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses the generated display item comprises a reproduction of the message when the second routine determines that the size of the message is greater than a predetermined size; and the routine comprises a fourth routine that provides the generated display item to the display for a predetermined time (column 3 line 62 to column 4 line 32).

Regarding claim 47, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses that the routine comprises a fifth routine that generates a further display item that comprises a portion of the message when the second routine determines that the size of the message is greater than a predetermined size; and

Art Unit: 2618

the routine comprises a sixth routine that provides the further display item to the display after the predetermined time has elapsed (column 3 line 62 to column 4 line 32).

Regarding claim 48, see the rejection of the parent claim concerning the subject matter this claim depends from. ICHIKAWA et al further discloses that the message is transmitted to the communication device via a broadcast network (column 2 line 27 to column 4 line 32).

## Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lewis G. West whose telephone number is 571-272-7859. The examiner can normally be reached on Monday-Friday 7:00-3:30.

Application/Control Number: 09/504,135 Page 7

Art Unit: 2618

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew D. Anderson can be reached on 571-272-4177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
